

Crest Link apparel uses imported microfibre fabrics from Taiwan. It is made from Japanese yarn, under the registered trademark of MICRO DRI. It offers efficient moisture absorption and evaporation, a smooth feel and is lighter in weight compared to other fabrics.

Crest Link uses imported heat transfer labelling technology on their apparel for a non-abrasive feel. The range of high-quality golf shirts also utilizes imported microfibre collars for long lasting colour, a non-curling effect and a smoother feel.

Crest Link keeps the golfer dry after a round in hot and humid weather. Thanks to MICRO DRI's wicking process, the golfer remains cool in hot climates. Crest Link apparel comes in many new and trendy colours with dynamic designs to suit all golfers.

### MICRO-DRI

Micro-Dri is the preferred choice of material for sports performance apparels. Due to the wicking process, the material provides faster absorption, dispersion and evaporation of moisture.

### MICRO-DRI UV

Micro-Dri UV provides protection against UV rays of UPF 30+. It complies with international standards, whilst providing all of the functions of Micro-Dri.

### MICRO-DRI A-VENT

CREST LINK presents the new "Air-VENTilation system", with ventilated fabric at strategic parts of the shirt. The A-VENT system keeps you cool and dry for a comfortable feel before, during and after the game.

### COMP.TECH

Crest Link Comp.Tech is designed to increase blood flow to the arms. It provides greater flexibility, reduction in muscle soreness and fatigue.
